

DLX ^{PLUS} TRUE COLOR

SHOWCASE LIGHTING

95
CRI

The new True Color DLX can produce a more full spectrum light that shows colors the way they are supposed to look. The typical cool white LED emits no light in the red spectrum and scores in between 70 and 80 on the color rendering index (CRI). This makes reds, greens, yellows and browns seem unnatural and washed out. True Color DLX, with a CRI score of 95, gives fine diamond jewelry all the shine and brilliance of cool white LED, without the color wash out effect.

Color temperature

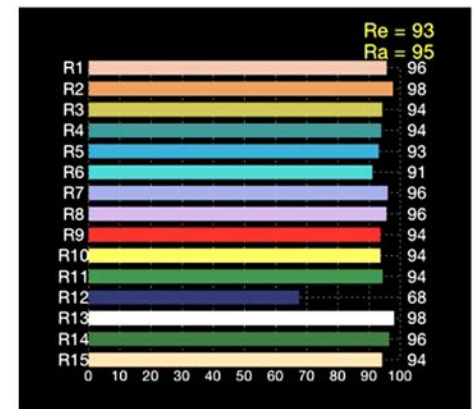

3000K

5000K
